

Easy

Table: Tweets

Column Name	Type
tweet_id	int
content	varchar

tweet\_id is the primary key (column with unique values) for this table.  
This table contains all the tweets in a social media app.

Write a solution to find the IDs of the invalid tweets. The tweet is invalid if the number of characters used in the content of the tweet is **strictly greater** than 15.

Return the result table in **any order**.

The result format is in the following example.

#### Example 1:

##### Input:

Tweets table:

tweet_id	content
1	Vote for Biden
2	Let us make America great again!

##### Output:

tweet_id
2

##### Explanation:

Tweet 1 has length = 14. It is a valid tweet.

Tweet 2 has length = 32. It is an invalid tweet.

# Write your MySQL query statement below

```
SELECT tweet_id
FROM Tweets
WHERE LENGTH(content) > 15;
```
